Mini-Project Problem Statement

Section: F

Team #	Project Name	Project Description	Programming Language
1	Student Attendance Management System	A system for tracking student attendance with automated reports.	Python (Django/Flask) / Java (Spring Boot)
2	Online Bookstore	An e-commerce platform for buying and selling books online.	JavaScript (MERN Stack) / Python (Django)
3	Hostel Management System	A system to manage hostel room allocation and student details.	Python (Django/Flask) / PHP (Laravel)
4	Task Manager Application	A task management tool to organize and track work progress.	JavaScript (React.js + Node.js) / Python (Django)
5	Chat Application (Socket Programming)	A real-time chat application using WebSockets for instant messaging.	(Node.js + WebSockets) / Python (Flask- SocketIO)
6	Online Exam Portal	An online examination system with multiple-choice questions and evaluations.	Python (Django) / JavaScript (MERN Stack)
7	Event Management System	A system to manage and organize events with registrations.	JavaScript (React.js + Node.js) / Python (Django)
8	Smart Complaint Management System	A platform for lodging and tracking complaints with admin resolution.	Python (Flask/Django) / PHP (Laravel)
9	Blood Bank Management System	A system to manage blood donation and availability in blood banks.	Python (Django) / JavaScript (Node.js)
10	Vehicle Parking System	A system for managing parking slots and vehicle tracking.	JavaScript (MERN Stack) / Python (Flask/Django)
11	Hospital Management System	A patient record and appointment management system for hospitals.	C / C++
12	Railway Reservation System	A railway ticket reservation system with booking and cancellation features.	C / C++
13	Traffic Management	A simulation of traffic flow using data structures like queues.	C / C++
